

Confirming glycoprotein visualization in *Ralstonia pickettii* via glycan modifying reagents

Missy Demczak, Class of 2021

The increasing ineffectiveness of existing antibiotics due to the evolution of microbial resistance has become a primary concern in the healthcare industry. Even when antibiotics are effective at treating a bacterial infection, these treatments are non-selective and can disrupt the human microbiome. The World Health Organization has listed resistant bacteria as a global health threat that need alternative treatments due to their severe resistance to current antibiotics¹. As well
