Measuring the Impact of Artificial Intelligence Technology on Employment and the Work Environment in the Legal Industry Maya Tang, Class of 2027

As generative artificial intelligence (AI) rapidly advances and becomes integrated into various professional fields, its implications for the legal profession remain underexplored. Existing studies on the impact of AI on the legal profession are limited and focus mainly on legal research, document review, and predictive analytics, with some interview-based investigations (Kaukinen, 2024; Weinstein, 2022). To the best of my knowledge, there is no research on the impact of AI on employment practices, interactions with clients, and structural dynamics. This study seeks to provide insights into the ongoing and potential future transformations driven by AI in the legal field.

In this research study, I conducted qualitative interviews (about 40 minutes each) with alumni from a prep school and a liberal arts college, both located in New England. Alumni were eligible to participate if they were over the age of 18, had at least one year of experience working in the legal profession, and were currently employed in an occupation in the legal field in the United States. I recruited participants via WKH SUH Slumn Webs Re On Winked In. So far, I have conducted 10 interviews, with more expected. Participants included 4 men and 6 women, with years of experience ranging from 3 toui TET Q0.00000912 0 612 792 reW*hBT/E 12 Tf1 0 0 1 64.775 462.ch1 0 0 2.df1 or solve the sum of the
